

V E S E R I U M

Technical Rider & Stage Plan

Thank you for your interest in booking Vesperium! This document contains details about our set as well as all of our technical requirements.

General Info

Set Duration: Up to 30 min, with ~5 – 10 second song transitions.
Company: 2 Performers
Contact: Ray Li
Phone: (847)208-2957
Email: discover@veserium.com

Primary Equipment: Virtual Reality Tracking Device (HTC VIVE)
Two pairs of Vesperium Gloves
Lenovo PC Monitor
HP Phoenix Desktop Tower
Roland Octa-Capture Audio Interface

Overview

The key component of our performance are two pairs of motion tracked gloves, which are powered by an HTC VIVE virtual reality tracking device. The gloves and the VR device will be operated from our own desktop computer, which we will bring. We will provide everything required to run the VR setup, however it will require sufficient operating room. Our virtual reality setup requires a minimum space of 12' x 5', and the computer will need to be present on stage as well. We will run all sound using our own audio interface, which will be mounted on a custom built cart, along with the desktop computer. This audio interface will provide our primary output.

Requirements

POWER

- **120V AC Power Outlet:** At least a single outlet is required – we will bring enough cables and power strips in order to be able to run off of a single outlet, but multiple outlets are preferred for convenience.

SOUND

- **Stereo Output:** A single stereo out channel – we can provide stereo output in any of the following formats:
 - 1 1/8 inch stereo jack output (male or female)
 - 2 1/4 inch mono jack outputs (male or female)
 - 2 XLR male outputs
 - 2 RCA male outputs
- **PA Microphone:** A single PA microphone connected to the house speakers (not for vocals, only for addressing the audience).
- **Stage Monitors:** Two stage monitors, on either side of the stage – one in front of each performer, and ideally with the full stereo out going to each.

VIDEO

- **Display Medium (Projection Screen/LED Wall/LCD Display):** A display medium to project accompanying visuals – we have visuals that will display a view of the gestures and motions being performed, and will be synchronized to the music.
- **Video Out:** Either **DisplayPort** or **HDMI** output to connect our video stream to the display medium.

LIGHTS

- We generally prefer for the house and stage lights to be as dim as possible – the gloves will be adorned with NeoPixel LED strips, and these light strips will be synchronized to accompany the projected visuals and music.
