

VESERIUM

Virtual Reality DJs | Sculpting Sound from Thin Air

Veserium is an electronic music duo that creates a live show like you've never experienced before. The duo uses virtual reality technology to create sound from thin air using only motions and gestures. Fans experience the music on an entirely different level, being able to see and hear the sounds as they are being created. Using their technology, Veserium is breathing a human element into EDM and pioneering a distinctly expressive sound filled with aggressive basslines and virtuosic melodies.

Veserium has taken the electronic music scene by storm, amassing an Instagram following of 25,000+, making an appearance in New York City at one of Brooklyn's largest venues (Brooklyn Mirage) to a crowd of over a 1,000, and performing at World's Fair Nano NY (attended by over 5,000 people).

The duo, who are graduates of Cornell University, have been featured on the The Discovery Channel, Upworthy, NowThis, Business Insider, Las Vegas Review Journal, and FOX28.

Veserium consists of former engineers Ray Li and Michael Ndubuisi who, unsatisfied with available performance technology, decided to create their own. By combining creativity and engineering, they are crafting sounds which have never been heard before, and as a result, re-engineering the DNA of electronic music. Veserium has won over the hearts of fans around the world who have been hungry for a truly original sound in electronic music.

What People Are Saying

"That's so dope" - *Steve Aoki*

"Renaissance-level creativity" - *Discovery Channel*

"Something none of us have ever seen" - *FOX28*

"Incredibly Impressive" - *Business Insider*
